Ma 130: Applied Calculus – Homework Exercises

Sections should be read before the lecture ~ Exercises are to be done before the following lecture.

Homework is intended as a space for you to develop conceptual understanding and skill at communicating your understanding. It is collected only as way to help you develop discipline and maturity. It is due at the start of the indicated class period (or may be turned in early). No late homework is accepted, and you may not copy solutions from another source.

For each section, indicate the homework problems completed (circle completed problems, add problem # for any unassigned problems you did). A problem is considered “completed” if you have confirmed that you have developed the solution accurately and can articulate the process by which you developed it.

Complete and submit this sheet as well as all application problems. Section numbers should appear at the beginning of each new section, and presentation will be evaluated based on the guidelines provided in the syllabus.

Full credit will be awarded if you completed a **sufficiently large, intentional, representative sampling** of problems throughout the chapter(s) with appropriate presentation. You do not have to complete all problems to receive full credit, and you will receive a penalty for failing to meet the presentation guidelines.
